```
import java.util.Scanner;
public class Numbers
{
// -----------------------------------------
// Reads in an array of integers, sorts them,
// then prints them in sorted order.
// -----------------------------------------
public static void main (String[] args)
{
        int[] intList;
        int size;
        Scanner scan = new Scanner(System.in);
        System.out.print ("\nHow many integers do you want to sort? ");
        size = scan.nextInt();
        intList = new int[size];
        System.out.println ("\nEnter the numbers...");
        for (int i = 0; i < size; i++)
                intList[i] = scan.nextInt();
                Sorting.selectionSort(intList);
                System.out.println ("\nYour numbers in sorted order...");
        for (int i = 0; i < size; i++)
                System.out.print(intList[i] + " ");
        System.out.println ();
        }
}
```
